

COVID-19

Ensuring accuracy of coded data

Helen Nolan
Healthcare Pricing Office
September 2022

HIPE

- HIPE based in the Healthcare Pricing Office (HPO), part of the Health Service Executive (HSE)
- The classification in use is the Australian ICD-10-AM/ACHI/ACS, 10th edition.
- HPO publish Irish coding standards and national guidance.
- HPO manages the data quality, classification support, coder training and IT systems for the data collection system.
- HPO receives HIPE data monthly from 56 public acute hospitals.
- Manage and develop data entry, data quality and reporting software for all hospitals.

Top 10 Principal diagnosis for cases with COVID-19 2020 to July 2022

J128	Other viral pneumonia	14244
R05	Cough	1906
R060	Dyspnoea	1527
J22	Unspecified acute lower respiratory infection	1518
N390	Urinary tract infection; site not specified	1107
R509	Fever; unspecified	1041
O80	Single spontaneous delivery	823
R55	Syncope and collapse	813
J440	Chronic obstructive pulmonary disease with acute lower respiratory infection	788
O82	Single delivery by caesarean section	638

Timelines

HE COVID-19 response

HE COVID-19 response

- Publication of FAQ's
- Input from senior clinicians to support coding queries
- Monitoring of COVID-19 data – queries to hospital
- Monitoring of coverage and compliance with 48 hours coding requirement
- Development of the daily report & dashboards
- New administrative variable added (flag)
- Support provided to HIPE data users

COVID-19 coding guidance

Classification guidelines for COVID-19

- ▶ Laboratory confirmed cases of COVID-19
- ▶ Clinically diagnosed or probable COVID-19
- ▶ COVID-19 Complicating pregnancy
- ▶ Suspected COVID-19, ruled out
- ▶ Post COVID-19 Conditions & multisystem inflammatory syndrome
- ▶ COVID-19 Vaccines causing adverse effect in therapeutic use
- ▶ HPO coding advisory: Unspecified pneumonia in COVID-19 cases
- ▶ Guidance on coding COVID-19 from antigen tests

COVID-19 Flag

Urgent response for collection during the pandemic

Lab-confirmed COVID-19 Past or Present

Case Types: This variable is collected for all inpatient and day cases. This is collected separately to ICD-10-AM codes for COVID-19.

Coders will choose “YES” if:

There is a diagnosis of Lab-confirmed COVID-19 during the current episode of care or there is documentation in the chart that the patient had a Lab-confirmed COVID-19 or Tested Positive with COVID-19 during a previous episode of care

Data Quality Reviews

- CVS hours – no ICU days
- More CVS hours than ITU days
- AO6 TRACHEOSTMY/VENT ≥ 96 HRS with no ICU days
- J18.9 Pneumonia unspecified V J12.8 Other Viral Pneumonia
- % of U07.1 COVID-19 Virus identified V U07.2 COVID-19 Virus not identified

Data Quality Reviews

PICQ Performance indicators for coding quality

- Benchmark performance across hospitals
- Identify cases codes incorrectly
- Helps identify focused areas for training
- Provides feedback at point of coding so that same errors are not repeated.
(email to coders the following morning after coding)

Chart Based Audit Coding of COVID-19

- Chart based audits recommenced in May 2022 (Targeted)
- 4 hospitals audited – further 3 planned to end of October.
- Total of 70 COVID-19 cases reviewed

Findings

- Overall excellent coding of COVID-19 identified
- Small number of discrepancies for assignment of
 - ❑ B34.2 Coronavirus infection, unspecified site
 - ❑ B97.2 Coronavirus as the cause of diseases classified to other chapters
- Small number of discrepancies for assignment of
 - ❑ U07.1 COVID-19 Virus identified (Lab confirmed)
 - ❑ U07.2 COVID-19 Virus not identified (clinically diagnosed)

Finally.....

- Flexibility to respond, quick response
- Communication/contact with hospitals
- Lot of impacts on system – rich source of data
- Difficult to identify/distinguish between patients admitted with COVID-19 V those with additional diagnosis of COVID-19
