ATI STUDY ON DRUGS

1. Context
2. Developed platform
3. A way to use it : some examples

Drug study: context

Since 2014, hospitals have been able to fill in a survey on every drug they buy. This survey is controlled by the French technical agency for information on hospital care (ATIH).

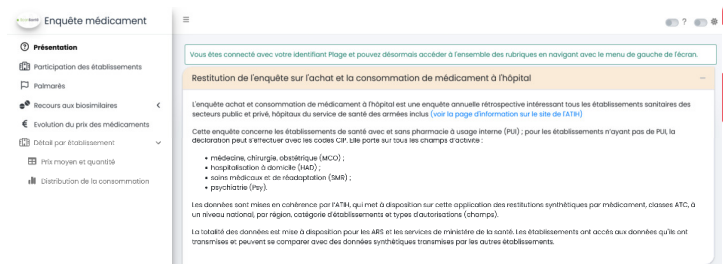

Every hospital field is concerned :

- Medicine, surgery, obstetrics
- Post-acute care and rehabilitation
- Hospitalisation at home
- Psychiatry

Representativeness is about 75 %

Number of hospitalisation days of hospitals that take part/Total of hospitalisation days in France in 2022

Drug Study: the platform

Hospitals have been able to access a new data platform since 2023 (Scansanté-Enquête médicament) :

- Data available from 2019 to 2022
- Information on cost and quantity available for each *common dispensing unit (drug code)*
- The platform provides tables and comparisons between hospitals, on a regional and national level
- Restricted access to participating hospitals and public institutions

Focus on Biotherapy / Biosimilars

Comparaison du recours aux biosimilaires

Cette page permet de comparer les taux de recours aux biosimilaires, en montant ou en quantité délivrée, selon l'un des axes suivants : la région, la catégorie d'établissement ou le type de champs. Vous avez la possibilité d'affiner le périmètre des groupes biosimilaires à intégrer dans le calcul des taux de recours.
